All About Cows

On Monday there was a farmer who brought a cow named Buttercup. Cows came to America with Christopher Columbus. Buttercup eats hay and dried grass. She also drinks a lot of water. She chews her food twice. After swallowing her food she throws it up and chews it again. People can tell how old is Buttercup because of the number of tags in her ear. Calves can walk when they are born and they can weigh a lot. Cows eat hay and other grass. Male are bulls. Girls cattle are cows. Baby cattle are called calves. The Dairy Council Mobile classroom taught us about how cows get old tags to know who owns the cows are dry or on vacation for 2 months so they could rest. Calves are baby cattle cows are girls and bulls are boys. A cow's baby use part of the food to grow. Buttercup can detect orders up to five miles away. Buttercup stands up and sits down 14 times a day. Buttercup can see color. Many cows have spots. But no cow has exactly the same pattern of spots. I hope I see Buttercup again.

On Monday at school the Dairy Council came to our school and brought a cow named Butter-cup. Butter-cup is a female dairy Jersey cow. Male cows are called bulls. Both cows are called cows. Baby cows are called calves. Cows are mammals. Cows can be all colors. Cows and bulls eat dried grass. They chew their food twice. After swallowing their food they throw it up and chew it again. Cows and bulls drink a lot of water. A cow drinks about 30 gallons of water per day. The age of a cow can be determined by counting the rings on its horns. A cow stands up and sits down about 14 times a day. Many cows have spots but no two cows have exactly the same pattern of spots. Cows have 32 teeth. When a calf is born, it will weigh 50 and 100 lbs. I hope to see Butter cup again.

all about cows

last Monday the Dairy Council came with a truck. First the man taught the class what cows do. I also learned from the man were milk comes from them he taught us vocabulary words. The man opened the truck and when he opened it Buttercup was eating hay. The man said that when she eats the hay it goes through the stomach and that's how it makes a lot of milk. Cows have a tag in the ear it also has a letter on his body. I could tell that cows like cud because they spend six to seven hours eating cud. The man said that the cow drinks 30 gallons of water per day. Cows can sit like us but it sits like 14 times a day. It takes two days to process her food into milk. Milk comes from a cow is healthy and it makes you strong. Cows can also see colors like we do. I hope to see another cow.

All About Cows

Last Monday The Dairy Council
 came with a cow. Her name is Buttercup
 Buttercup stings up and sits down about 14 times a
 day. A day ago told us cow came to America with
 Christopher Columbus. There are an estimated 900 different
 breeds of in the world when the Dairy Council
 brought cow to the fair track they put sign to
 keep them safe. A cow drinks about 30 gallons
 of water per day. Cow can detect odor up to five
 miles away. Milk cows usually have their ear pinned.
 The ID tag number are different to each cow and
 help the farmer track their activities. Cow spends six to seven
 hours a day eating and eight hours chewing cud. Many
 cows have spots but no two cows have exactly the
 same pattern of spots. Cows can see color. A cow body
 use part of the food to grow and stay healthy
 and the other part of the food to make
 milk. I hope I can see dip and Buttercup
 again.

On Monday morning there was a pick-up truck with a trailer and a cow. The cow was wearing a safety belt it is called a Stanchion seat-belt. It was the dairy council Mobile classroom and they taught us about cows. There was a cow called Buttercup. Buttercup was a Jersey cow. Cows are mammals. They are herbivores. They are used for milk or meat. Their predators are Burger King and farmer Victor. Male cows are called Bulls. Females are called Cows. There are approximately 300 squirts in a gallon of milk. Cows eat alfalfa hay and corn but not the corn like we eat, and they also drink a lot of water. Cows chew their food twice after swallowing their food they throw it up and eat it again. Cows have 4 parts in their stomach. They use the rest to make in their udder. Buttercup was sweet as a humbleberry. I hope I see Buttercup again. I'll miss you. Buttercup

All About Cows

On Monday morning a worker of the Dairy Council Company came to our school. The worker brought a cow named Buttercup and a calf named Chip. Buttercup was 5 years old. Cows can be mothers when they are 2 years old. Buttercup had stunchion bars that are seat belts. Cows came to America with Christopher Columbus. If cows did not exist we would not have milk. Cows do not have milk cold because cows do not have a refrigerator. Cows chew twice their food. Cows can see beautiful colors. Cows have 4 parts in their stomach. A cow drinks about 30 gallons of water per day. Buttercup had a number tag and it had numbers like 66088. Many cows have spots but Buttercup was brown and furry. Cows can detect colors up to five miles away. The age of a cow can be determined by counting the rings on it's horns. Many cows have spots, but no two cows have exactly the same pattern of spots. Cows like Buttercup is the best Cow in the world.

Last Monday a truck came to our school and there was a milk man and a cow named Butter-up. The milk man told us what cow's eat like all day. The milk man also told us that the cow's chew their food and they through it up and then they eat it. From us learned that the cow's don't use seat belts but they use stomachs horns. They also have little in their skin but it doesn't hurt for ever. They hurt when they get them and the next day it doesn't hurt any more. We also learned that cow drinks about 20 gallons of water per day. From us learned that cow's can detect odors up to five miles away. We also learned that many cow have spots but some two cow have exactly the same pattern of spots. Cow have 32 teeth, most of which are on the bottom since they do not have top teeth in the front of their mouth. On average a cow eat about 40 pounds of grain and about 50
